Addendum #3

Date Addendum Issued : February 1, 2018

Project Name : "N8090 Drainage and Roadway Improvements Design Project"

Bid # : 17-10-1741JJ

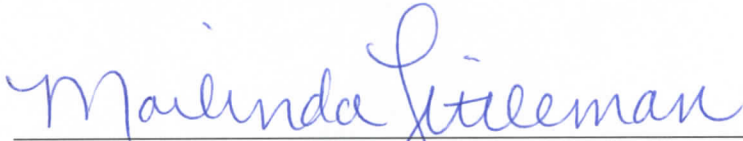

Owner : Navajo Division of Transportation (Navajo DOT) –
Department of Roads

Addendums/Clarifications:

- Will the design speed be supplied by NDOT to determine the design parameters for the horizontal and vertical alignments? The standard speed limit on the Navajo Nation is 55 MPH max.
- From the RFP, it is stated there is no ROW but generally 75 feet each side of the existing road there is a prescriptive ROW. What latitude is there for centerline adjustment where warranted to provide proper horizontal alignment? The latitude will be determined once the contract is awarded.
- It is assume a geotechnical evaluation has been completed to address what type of stabilized road section to design and boreholes completed to determine soil types, bedrock, or other limitations. If not shall the Geotechnical Investigation be included in the proposal? The geotechnical evaluation has not been completed, but it will not be part of the RFP.
- We noticed there are progress meetings at 30%, 60%, 90% and 100%. We assume they will held at the NDOT office? Yes, all meetings will be held at Navajo DOT.
- In reference to the Topographic and Centerline Field Survey. There are no referenced specifications, is there a specification NDOT will require surveyor's to use? The vendor will propose the specification and Navajo DOT will review and approve.
- Under the project deliverables there is a requirement to provide project benchmarks and survey control. There is no stipulation on the number or spacing of primary and secondary control points needed, will NDOT provide a requirement? The bench mark will be one mile. The Point of Curve, Point of Tangent, and Point on Tangent will be one mile.

- With the amount of uncertainties, there is a request for an extension for this RFP? Navajo DOT will not grant an extension because the funding need to be expended.

Thank you for your interest:
